●Flight Environment

V-Coptr Falcon should be flown in a normal flight environment. A normal flight environment includes but is not limited to:

- 1.An open environment away from people, animals, no-fly signs, electromagnetic interference, and buildings;
- 2.It is not recommended for flying at high altitudes;
- 3.In temperatures of 0 °C - 40 °C and good weather (no rain , snow , fog, thunder, wind, hail or extreme weather conditions) conditions, as well as in legal areas. For legal areas, please read the "Flight Regulations and Restrictions" section;
- 4.Flying in an environment with a maximum of Grade 5 winds, otherwise the drone may not be able to fly normally, or may even cause damage or personal injury;
- 5.When flying indoors, functions of V-Coptr Falcon may be limited due to insufficient lighting, poor GPS signal, insufficient space and other environmental factors;
- 6.Do not let the drone fly in an environment where the ground height varies greatly (e.g. fly out of a high-rise window)and when the GPS signal is weak, in case the positioning function is interfered and thus impacts flight safety.

●Wireless Communication

You should ensure that wireless communication is working properly before flying V-Coptr Falcon. Conditions for wireless communication to work properly include but are not limited to:
